flash mode can be set either on the flash

### **Canon dental photography guide**

At How-To Geek, we're big fans of Manual and semi-automatic shooting modes—like Aperture Priority. They give you a lot more creative control over your images than leaving your camera in Automatic or Program mode and letting it make every decision. On Canon cameras, you switch between different shooting modes using the dial on the top.

Example of photograph taken in fully manual settings Digital SLR Camera: Canon EOS 400D / Rebel XTi DSLR Lens: Canon EF-S17-85mm f/4-5.6 IS USM Exposure: 0.2 sec (1/5) Aperture: f/22 Focal Length: 85 mm ISO Speed: 100 Exposure Program: Manual Flash: Flash did not fire. Why this shot worked

### **Tips for manual mode camera settings - SLR Photography Guide**

Aside from “disable,” the first option is a ratio, where your external flash and on-camera flash will fire in tandem at a ratio you choose (like 4:1 or 1:1). The second option means that only your off-camera flash will appear in your photo (though the on-camera flash will trigger it with a pre-flash).

Understanding Manual Flash. On a fully Manual flash, there is no control (d either by the camera or the flash) over the intensity or duration of the light emitted from the flash. Instead, it is the photographer who controls the output of the flash by adjusting the settings, either in-camera or on the flash itself.
