Chapter 9 Agitation And Mixing

- Agitation: It refers to the induced motion of a “homogenous” material in a specified way
- Mixing: It is the random distribution, into and through one another, of two or more initially separate phases

PURPOSES OF AGITATION

- Suspending solid particles
- Blending miscible liquids
- Dispersing a gas through the liquid

The chapter provides a background for the engineer who must assess and use these new contributions, reviews the extensive published literature on mixing and agitation, and presents useful results and techniques of approach that can be used to achieve understanding of many mixing situations.

For example, the sun is the agitation source for mixing in the earth's atmosphere. Similarly, an air compressor and/or a mechanical mixer is the agitation source in any municipal wastewater treatment plant to enhance the process results of (1) solids suspension and (2) oxygen absorption from sparged or entrained air.

MIXING AND AGITATION - ScienceDirect

Nagata et al. (N2) studied the rate of mixing of high viscosity liquids in 3.9-, 7.9-, and 11.8-in. diameter unbaffled vessels. They used a variety of agitators, including a ribbon-type mixer, and a paddle whose blade height was the same as its diameter (80% of vessel diameter).

Chapter 9 - Psychiatric Causes of Agitation: Exacerbation ...

Mixing the movement of fluids and solids to enhance a process result is accomplished by means of an agitation source. For example, the sun is the agitation source for mixing in the earth's atmosphere. Similarly, an air compressor and/or a mechanical mixer is the agitation source in any municipal wastewater treatment plant to enhance the process results of (1) solids suspension and (2) oxygen absorption from sparged or entrained air.
