This condition can cause a finger to get stuck in a flexed (bent) position, a condition sometimes called "trigger finger". Prophylactic surgery, such as tenosynovectomy, to manage tenosynovitis can prevent rupture of tendons and avoid the necessity of more involved reconstructive surgery. The operation we recommend for the finger with rheumatoid tenosynovitis is a tenosynovectomy, but with maintenance of the pulley system and resection of one slip of the superficialis in order to ...
