Cooties is a fictitious childhood disease. It is used in the United States and Canada as a rejection term and an infection tag game (such as Humans vs. Zombies).It is similar to the British 'dreaded lurgi', and to terms used in the Nordic countries, in Italy, Australia and New Zealand. A child is said to "catch" cooties through close contact with an "infected" person or from an opposite-sex ...

Thankfully, I grew up in a part of the world that doesn't have a significant cootie problem. In Britain, we have the dreaded lurgies, but make no mistake about it - the cooties are coming, and it's vital we take adequate steps to protect ourselves against this invisible threat. The exact taxonomic definition of cooties has thus far evaded scientists as no living sample has ever been isolated.

The only true protection from cooties, as every child knows, is completely avoiding the opposite sex. Cooties are generally contagious, so you don't have to actually be in contact with the opposite gender. You can catch cooties from items like pencils or chairs, or from traitorous members of your own gender who do engage in contact with nonmembers.
