Identifying vertebrates using a dichotomous key

A dichotomous key can be used to easily identify unknown organisms. The word dichotomous comes from two Greek words that together mean, "divided in two parts". A dichotomous key consists of a series of two-part statements that describe characteristics of organisms. At each step of a dichotomous key the user is presented with two choices.

Houston Community College

A dichotomous key is a tool that helps to identify an unknown organism. A dichotomous key is a series statements consisting of 2 choices that describe characteristics of the unidentified organism. The user has to make a choice of which of the two statements best describes the unknown organism, then based on that choice moves to the next set of statements, ultimately ending in the identity of the unknown.

Keys and identification - Classification - GCSE Biology ...

Dichotomous Key Definition. A dichotomous key is a tool created by scientists to help scientists and laypeople identify objects and organisms. Typically, a dichotomous key for identifying a particular type of object consists of a specific series of questions. When one question is answered, the key directs the user as to what question to ask next. Dichotomous keys typically stress identifying species by their scientific name, as each individual species has a unique scientific name.
