Intelligent Sensor Management (ISM®) ISM ® is a sophisticated safety concept that leaves nothing to chance. The instrument automatically detects the connected sensor and uses the most up-to-date calibration data stored on the sensor chip. SevenExcellence™.

Intelligent Sensor Management (ISM®) - METTLER TOLEDO

UniCond™ conductivity sensors with ISM contain electronics embedded in each sensor to convert the process measurement into a digital signal. UniCond extends the range of measurement to cover UPW to seawater with a single sensor, saving cost and inventory. UniCond sensors provide the highest accuracy available to enhance efficiency.

Cummins Sensors provide a whole solution package, enabling system integration while meeting critical regulations. Cummins provides sensors that support a multitude of critical components on your engine - from controlling the speed of the turbocharger to assisting the level of NOx taken into the aftertreatment system. Product Benefits:

Location of speed sensor on cummins isx engine

"The engine position sensor number 1 (primary) and engine position sensor number 2 (back up) provide engine speed and position information to the ECM through the engine harness. Both engine position sensors are triggered by gaps in the tone wheel which is part of the camshaft" What I don't know is how to test the sensors, if there is an ohm reading I can check or if there's a certain hertz at idle to look for... Any ideas? Thanks for your time! Wesco

It comprises engine sensors, relays, and actuators that work together. They provide the car's Engine Control Unit with vital data parameters essential to govern various engine functions effectively. Generally speaking, Engine sensors are the electro-mechanical devices which monitor various engine parameters. An engine uses different types of sensors.

Engine Sensors: What Are Different Engine Sensors And How ...

A MAP sensor is one of the electronic controls listed in a group known as pressure sensors. It analyzes the pressure of vacuum created when the fuel mixture passes through the intake manifold. Then, it emits a signal that helps the Engine Control Module (ECM) make adjustments that affect internal combustion.

These ism engines are very sensitive on the charge air side to the turbo overadjusting. I have dealt with this issue many times in the past and there are a few things that can cause this. Make sure the intake manifold pressure sensor is not plugged or reading biased at key on engine off.
