In this lesson we define momentum as mass times velocity and calculate the momentum of a moving object using $p = mv$. We describe the vector nature of momentum; in other words, that it has both magnitude and direction. 2. Newton's Second Law in Terms of Momentum In this lesson we state Newton's Second Law in terms of momentum by finding two

Conservation Of Momentum | Momentum And Impulse | Siyavula

Since momentum is a vector, the techniques of vector addition discussed in Vectors and scalars in Grade 10 must be used when dealing with momentum. Change in momentum (ESCJ9) Particles or objects can collide with other particles or objects, we know that this will often change their velocity (and maybe their mass) so their momentum is likely to ...

Physical Science Question Papers Grade 10

Students learn about the physical force of linear momentum — movement in a straight line — by using the associated activities to investigate collisions. They learn an equation that engineers use to describe momentum. Students also investigate the psychological phenomenon of momentum; they see how the "big mo" of the bandwagon effect contributes to the development of fads and manias, and ...
