Document Sets in SharePoint Server 2010 (ECM) | Microsoft Docs

SharePoint 2010 has introduced a better method for storing these documents in one of their new features, Documents Set. A Document Set groups files together but also give you the option to create additional attributes associated with each set enabling you to find the set of documents you are looking for more efficiently. These attributes are known as "Metadata" which can be synchronized between the Document Set and all the files with in it.

Document Sets in SharePoint 2010 | DMC, Inc.

Document Set is a new feature introduced in SharePoint 2010 as part of content/document management. Document set helps to manage group of documents as a single entity. Actually Document set is a content type that can be attached to any document library and make use of it's features.

What is Document Sets in SharePoint 2010?

Document Sets were newly implemented in SharePoint 2010 and not without limitations so folder functionality could not be eliminated. The single limitation I found that most impacted our implementation of Document Sets was the inability to declare Document Sets as in-place records, meaning you can only declare them as records in a Records Center.

Enabling multiple Document Set views - Dan Sanders

SharePoint search was already configured and, actually, I could search within document sets, by doing a site wide search and then using the refinement panel (on the left hand side of a search result page in a search center) to narrow it down to my document set. What I wanted to do was perform this search directly from a search box.
