Ethics of cloning - Wikipedia

Human cloning requires us to think about the nature of a human embryo, the moral status of the human embryo, what is required by respect for human embryos, and whether the distinction between 'spare' embryos (that is, those left over from in vitro fertilization or IVF) and embryos deliberately created for research purposes has moral significance.

Ethics of Human Cloning - Oxford Scholarship

Much of the debate about the ethics of cloning for research and therapy turns on a basic disagreement about how we should treat early human embryos. As it is currently done, the isolation of embryonic stem cells involves the destruction of embryos at the blastocyst stage (day five after fertilization, when the embryo consists of 125-225 cells).
